

Average Year Difference across all countries	4.8	Minimum Year	2015
Minimum Year Difference across all countries	1	Maximum Year	2020
Maximum Year Difference across all countries	5		

Comparison of Year Differences

The Average Year Difference across all countries is 4.8 years.
The Maximum Year Difference is 5 years.
This means the average year difference (4.8 years) is very close to the maximum observed year difference (5 years).
The Minimum Year Difference is 1 year.
The average year difference (4.8 years) is significantly higher than the minimum observed year difference (1 year).

Comparison to Years in the Dataset

The initial analysis of the data was performed on a dataset with years ranging from 2000 to 2020.
The average year difference of 4.8 years is a measure of the typical time gap between consecutive data points for a single country within that 2000–2020 range.
The maximum year difference of 5 years suggests that the most common data reporting frequency for countries is every 5 years (e.g., 2000, 2005, 2010, etc.).
The minimum year difference of 1 year indicates that some data points were reported yearly for specific countries.

Summary Statistics for ARC_n, ARC_r, and ARC_u

	avg	min	max
ARC_n	0.2767441419	-1.021788674	2.750326488
ARC_r	0.484403956	-1.22739056	2.667862638
ARC_u	0.1548234028	-1.62086812	2.668211856

the average rural access has increased more significantly per year than urban access because the average ARC value is higher; however, we have not considered observations where access is already 100%.

how can we determine the number of countries that have full access to basic water services?

	N of "full access"
ARC_n_full	62
ARC_r_full	29
ARC_u_full	55

	N of Missing ARC	N. of ARC=0 and No Full Access	N. of ARC<0 and No Full Access	N. of ARC>0 and No Full Access
ARC_n	2	16	16	135
ARC_r	64	5	17	116
ARC_u	50	7	26	93

summary Region				
Region	Number	avg ARC_n	ARC_r	ARC_u
